CSS Resume Website — Assignment Submission

Student: [Enter your full name]

GitHub Repository Link: [PASTE YOUR EXISTING GITHUB REPOSITORY URL HERE]

Overview

I enhanced my personal resume website using CSS to improve its visual design, layout, readability and responsiveness. The updated website presents my profile, skills, education and contact information in a clean, organized format.

CSS Improvements Made

• **Navigation bar:** Added a sticky navigation bar using CSS Flexbox with links to the main resume sections.

• **Typography:** Applied the Google Font “Inter” and improved heading sizes, line spacing and text hierarchy.

• **Color palette:** Used a consistent navy, blue and light-grey theme with contrasting backgrounds and buttons.

• **Cards and layout:** Created a three-column skills section with CSS Grid, card borders, rounded corners and subtle shadows.

• **Spacing and alignment:** Used reusable container classes, margins, padding and section spacing for a balanced layout.

• **CSS selectors:** Used element selectors, class selectors, pseudo-classes such as :hover, and the :root selector for color variables.

• **Responsive design:** Added a media query to adapt navigation, hero content and cards to smaller screens.

• **Interactive details:** Added hover effects, smooth scrolling and anchor links for easier navigation.

Repository Update

The updated **index.html** and **style.css** files should be uploaded to the same GitHub repository used for the HTML module. Verify that both files are visible in the repository before submission.

Important: Replace the name and GitHub URL placeholders above and upload the actual files to GitHub before submitting this PDF. The link has not yet been verified.
